

Hulled sesame processing line

Professional technological systems for the food and chemical industries

Application

Hulled sesame processing line is used in industry and enables separation of the husks from the sesame seeds. The raw material prepared in this way is used in the production of sesame pulp and halva or packed and sold as hulled sesame seeds.

Description

Sesame seeds are delivered in bags from where they are manually fed to the conveyor. They are transported by a conveyor to a buffer silo, and then a preliminary cleaning process is done. Then it is fed to the next silo, from where it is fed to containers in which the second stage of the cleaning process is carried out. The grains are transported from the containers to the fluid bed dryer where the moisture is removed and the grain husks is separated.

Technical specification*

* Technological parameters, structure and its individual elements are each time adjusted to the customer's needs.
