

Hygienic shredder

Professional technological systems for the food and chemical industries

Application

The hygienic shredder is used for grinding loose materials (e.g. granules, grains, powders), especially those that are highly hygroscopic and lumpy. The device can operate in a potentially explosive atmosphere.

Description

The special construction made of stainless steel allows the shredder to be disassembled into elements, providing the hygiene of work. It is possible to execute the device in a mobile version.

On the arm, gear motor is swingingly mounted to which the body of the device is attached. The shaft is embedded in a hollow sleeve of the gear motor.

Technical specification*

The device consists of:

- body
- frame
- motoreducer

* Technological parameters and construction are individually adjusted to the needs of a customer.

Offered devices can differ from the ones presented in the pictures
