

Mixer

Professional technological systems for the food and chemical industries

Application:

Mixer is a device designated to mix dry products placed in the mixing chamber and in effect creating a homogenous mixture.

This device can be used to mix various product types and can find application in food, chemical and other related industries.

Description:

Inside the mixer body there is a shaft with a mixer arm which rotating around its own axis causes the raw material to mix. On the top there is a raw material intake, and at the end of the chamber there is a gate valve of the ready mixture outfall.

Technical specification*

The device consists of:

- Mixing chamber
- Shaft with a mixer arm
- Lids with gate valves
- Propulsion
- Mixer frame.

*Technological parameters and construction are individually adjusted to the needs of a customer

Offered devices can differ from the ones presented in the pictures
