

Spring-spiral conveyor

Professional technological systems for the food and chemical industries

Application

The spring-spiral conveyor is a device that is used for the mechanical transport of dry bulk materials such as powders, granules or dusts. It can also be used as a dosing device.

Description

The basic element is a flexible spring placed in the transport pipe. From the top, the gearmotor drive is attached to the outlet flange. In addition, the inlet and outlet of the raw material are placed on the transport pipe.

Technical specification

Depending on the application, we manufacture traditional conveyors, as well as per special order.

The conveyor length and construction is arranged based on the product and parameters information obtained from the client.

Offered devices can differ from the ones presented in the picture
